**DETAILED ACTION*****Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-17, 22-25 and 27-31, drawn to a device for wet treatment of wafers.

Group II, claim(s) 18, 20, 21, 32-35 and 37, drawn to a method for wet treating a single wafer.

2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Evidence of lack of unity between Group I and II is found in USPN 6,632,292 to Aegerter et al. in view of USPA 2002/0162570 to Cavazza, which discloses the features of instant claim 1. Aegerter discloses a device for wet treatment of wafers, comprising a first plate and second plate substantially parallel to the first plate (Col. 10, lines 41-42; Figure 10); holding means for holding a wafer between said first and second plates substantially parallel to said plate (Col. 9, lines 52-60); first dispensing means for introducing a fluid into a first gap between said first plate and a wafer being treated and second dispensing means for introducing fluid into a second gap between the second plate and the wafer (Col. 10, lines 56-64); and rotating means for rotating the holding means and second plate relative to each other about an axis substantially perpendicular to said second plate (Col. 9, line 62-Col. 10, line 14). While Aegerter does not teach a vibrating element acoustically coupled to at least said second plate, Cavazza discloses a transducer (vibrating element) coupled to a working surface (second plate) (Page 1, Paragraphs [0011]-[0015]). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the device of Aegerter with the vibrating element taught by Cavazza in order to improve cleaning of the wafer, since ultrasonic vibration is known to enhance cleaning.

Art Unit: 1792

Such, the corresponding special technical feature of the claimed invention is not found to define a contribution over the prior art.

3. A telephone call was made to Robert Goozner on 8/4/09 to request an oral election to the above restriction requirement, but did not result in an election being made.

4. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

5. The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
